PROJECT REPORT

■ □ DIGITAL LITERACY PROJECT REPORT (DETAILED VERSION)

Digital Literacy

Name: Tanisha Dangwal
Register Number: 25BCE10590
Branch: B.Tech Computer Science Engineering
Year: 1st Year
Course Code: CSE0001
Date: 31/MAR/2026

□ Introduction (Expanded – ~130 words)

In today's digital era, technology plays a vital role in education, communication, and professional development. Digital literacy refers to the ability to use digital tools, platforms, and online resources effectively, responsibly, and safely. As a Student Digital Ambassador, this project aims to spread awareness among students about the importance of digital literacy and how it can enhance both academic performance and career readiness.

This project is divided into five key tasks, each focusing on a different aspect of digital literacy. These include designing an awareness infographic, building a professional digital portfolio, exploring coding and collaboration platforms, learning proper email etiquette, and understanding cybercrime and its prevention. Through these activities, I gained practical knowledge of digital tools and developed a deeper understanding of responsible online behavior. This project highlights the importance of being a smart and safe digital user in today's connected world.

□ Task 1 – Infographic Write-up (Detailed – ~180 words)

For this task, I designed a Digital Literacy Awareness infographic using Canva, a widely used online design tool known for its simplicity and variety of templates. I selected a minimalist and

structured infographic layout to ensure that the information is clear, visually appealing, and easy to understand for students.

The infographic covers multiple important aspects of digital literacy. It begins with a definition of digital literacy, explaining it as the ability to use digital tools effectively and responsibly. It also includes sections on useful digital tools such as Google Docs, GitHub, Canva, and Zoom, which are commonly used by students for academic purposes. Additionally, I included safe internet practices, such as avoiding suspicious links, using strong passwords, and protecting personal information. The infographic also highlights the importance of maintaining a professional online presence through platforms like LinkedIn, and includes basic email etiquette tips.

One of the most interesting aspects of this task was learning how to present a large amount of information in a limited space without making the design cluttered. It required careful selection of content, proper alignment, and the use of icons to enhance visual understanding.

□ Task 2 – Digital Portfolio Write-up (Detailed – ~190 words)

In this task, I created and updated my profiles on GitHub, Kaggle, Stack Overflow, and LinkedIn to establish a strong digital presence. These platforms are widely used in the academic and professional world, and they help students showcase their skills and connect with others in their field.

GitHub is a platform used for storing, managing, and sharing coding projects. It allows me to build a portfolio that demonstrates my programming skills. Kaggle is a data science platform that provides datasets, notebooks, and competitions, helping users improve their analytical and machine learning skills. Stack Overflow is a community-based platform where programmers ask questions, share knowledge, and solve technical problems collaboratively. LinkedIn is a professional networking platform where I added my educational details and can connect with peers, seniors, and recruiters.

Each platform serves a unique purpose in my learning journey. GitHub helps track my progress, Kaggle enhances my practical skills, and Stack Overflow improves my problem-solving ability. LinkedIn helps me build a professional identity.

Over the next four years, I plan to actively use these platforms by uploading projects, participating in competitions, engaging with the community, and building a strong professional network to prepare for internships and career opportunities.

□ Task 3 – Platforms Write-up (Detailed – ~170 words)

In this task, I explored both coding practice platforms and collaboration tools. I created an account on HackerRank and completed a beginner-level coding challenge called “Solve Me First.” This task helped me understand basic programming concepts such as taking input and producing output, and it improved my logical thinking and problem-solving skills.

In addition to coding practice, I created a Google Form titled “Digital Literacy Awareness Quiz” to engage my batchmates. The form contains five questions, including both multiple-choice and short-answer types, to test basic knowledge of digital literacy. I also linked the form to a Google Sheet, which automatically records responses and allows easy analysis of data.

These platforms are highly useful in academic settings. HackerRank helps students practice coding regularly and improve their technical skills, while Google Forms is an effective tool for creating quizzes, surveys, and collecting feedback. This task helped me understand how digital tools can be used not only for learning but also for collaboration and knowledge sharing.

□ Task 4 – Email Etiquette Write-up (Detailed – ~130 words)

Professional communication is an essential part of digital literacy. In this task, I learned how to write formal emails using proper structure, tone, and etiquette. Poorly written emails can create misunderstandings and may leave a negative impression on professors or employers. For example, an email without a subject line, greeting, or proper formatting may be ignored or considered unprofessional.

By practicing email writing, I understood the importance of clarity, politeness, and structure in digital communication. A well-written email should include a clear subject line, a respectful greeting, a concise and meaningful body, and a proper closing. This task helped me develop my professional communication skills, which will be useful in academic interactions and future workplace environments.

□ Task 5 – Cybercrime Write-up (Detailed – ~130 words)

While researching UPI and online payment fraud, I was surprised to learn how easily scammers can manipulate individuals by creating a sense of urgency and confusion. Many users do not understand that entering a UPI PIN actually authorizes a payment rather than receiving money. This misunderstanding makes students and inexperienced users more vulnerable to fraud.

This research increased my awareness of digital financial security. One important habit I will adopt is to always verify payment requests carefully and never enter my UPI PIN unless I am certain that I am making a payment. I will also avoid clicking on unknown links and ensure that I

use only trusted applications for financial transactions. This task highlighted the importance of being cautious and informed while using digital payment systems.

□ Conclusion (Expanded – ~110 words)

In conclusion, this project provided me with a comprehensive understanding of digital literacy and its importance in modern life. I learned how to use various digital tools effectively, communicate professionally, and stay safe while using online platforms. The project also helped me build my digital portfolio and improve my technical and communication skills.

Through this experience, I have developed a more responsible and aware approach toward digital usage. These skills will not only help me in my academic journey but also prepare me for future career opportunities. Overall, this project has been a valuable learning experience that strengthened both my practical knowledge and digital awareness.
